1. Title:
The Association of Distensibility and Carotid Wall Thickness in a Population of Healthy Middle Aged Adults

2. Objective:
Examine the distensibility/wall thickness (overall) relationship in the entire population, look at the realtionship with site specific wall thickness.

3. Lead:
W. Riley

4. Variables:
Race, age, gender, pulse pressure, EP, diameter change, Young's elastic modulus, body size, BP, far wall thickness (all sites)
