1. Title:
Blood Pressure Distributions

2. Writing Group:
(lead) Nieto
    Szklo
    Tyroler
    Hutchinson

3. Timeline:
ASAP

4. Rationale:
The purpose of this paper is to examine the distribution of blood pressure measurements at the baseline examination according to a variety of sociodemographic, anthropometric, and other life-style and constitutional factors. The relevant writing groups will be contacted, to avoid overlap (e.g., MS#017A).

5. Main Hypothesis:
This is a descriptive paper.

6. Data:
Blood pressure as a continuous variable, as well as hypertension prevalence will be the main dependent variables. Among the independent variables: sociodemographic (age, sex, race, education, center, marital status), anthropometric (height, BMI, skinfolds, waist-to-hip ratio), others (physical activity, family history, etc.).

Keywords: BP, anthro, sociodemographic, hypertension
