Version 1.7: July 10, 1987
FOREWORD

This manual entitled, Pulmonary Function Assessment, is one of a series of protocols and manuals of operation for the Atherosclerosis Risk in Communities (ARIC) Study. The complexity of the ARIC Study requires that a sizeable number of procedures be described, thus this rather extensive set of materials has been organized into the set of manuals listed below. Manual 1 provides the background, organization, and general objectives of the ARIC Study. Manuals 2 and 3 describe the operation of the Cohort and Surveillance Components of the study. Detailed Manuals of Operation for specific procedures, including reading centers and central laboratories, make up Manuals 4 through 11. Manual 12 on Quality Assurance and Quality Control contains a general description of the study's approach to quality assurance as well as specific protocols for each of the study procedures.

The version status of each manual is printed on the title sheet. The first edition of each manual is Version 1.0. Subsequent modifications of Version 1 (pages updated, pages added, or pages deleted) are indicated as Versions 1.1, 1.2, and so on, and are described in detail in the Revision Log located immediately after the title page. When revisions are substantial enough to require a new printing of the manual, the version number will be updated (e.g., Version 2.0) on the title page.

## Pulmonary Function Assessment

1. **Introduction** ................................................................. 1
   1.1 The Importance of Pulmonary Function Testing in ARIC ............. 1
   1.2 Description of the Pulmonary Function System ........................ 2

2. **Pulmonary Equipment** ..................................................... 4
   2.1 Description ........................................................................ 4

3. **Installation** ....................................................................... 6

4. **Computer Software** ............................................................ 8
   4.1 General Information--Before Beginning Procedure ................... 8
   4.2 Main Pulmonary Menu Description ...................................... 8

5. **Protocol Summary** .............................................................. 11
   5.1 Daily Procedures ................................................................ 11
   5.2 Weekly Procedures ............................................................ 12
   5.3 Manual Back-up Procedures for Recording Raw Pulmonary Function Data .................................................. 13

6. **Instrument Preparation and Calibration** .................................. 14
   6.1 Power-up the Computer ..................................................... 14
   6.2 Water Level/Temperature .................................................. 14
   6.3 Spirometer Hose ............................................................... 14
   6.4 Pen Check ......................................................................... 16
   6.5 Chart Paper and Baseline Checks ....................................... 16
   6.6 Time and Leak Checks ..................................................... 16
   6.7 Linearity Check ............................................................... 19
   6.8 Volume Calibration Check ................................................. 23

7. **Participant Information** ........................................................ 29
   7.1 Entering Information on Computer ...................................... 29
   7.2 Editing Information .......................................................... 29

8. **Participant Spirometry Testing** ............................................. 32
   8.1 Explanation of the Procedure ............................................. 32
   8.2 Postponement of the Test .................................................. 32
   8.3 Positioning the Subject ..................................................... 33
   8.4 Demonstration of Procedure ............................................. 33
   8.5 Operation of the Flow-Volume Loop Program ......................... 34
   8.6 Quality Assessment ......................................................... 36
   8.7 Report Generation ............................................................ 48

9. **Data Management** ................................................................................. 51
   9.1 Description ......................................................................................... 51
   9.2 Data Disk Formatting Procedure ........................................................ 51
   9.3 Data Storage Procedures (Daily) ........................................................ 52
   9.4 Data Storage Procedures (Weekly) ...................................................... 53
   9.5 Additional Menu Commands .............................................................. 56

10. **Cleaning and Maintenance of the Spirometer** ................................. 58
   10.1 Emptying the Spirometer ................................................................. 58
   10.2 Cleaning the Internal Parts ............................................................... 58
   10.3 Cleaning the Breathing Tubes ........................................................... 59

11. **Data Transfer and Quality Control Procedures** ............................... 60
   11.1 Pulmonary Function Data Flow Chart ............................................. 60
   11.2 Quality Assurance Procedures at the Field Center .......................... 60
   11.3 Information Received from the Field Centers ................................. 60
   11.4 Data Management Procedures at Pulmonary Function Reading Center .................................................................................................................. 61
   11.5 File Format for Pulmonary Function Test Records ......................... 63
   11.6 Coordinating Center's Response to Pulmonary Function Reading Center .................................................................................................................. 68

12. **Terms and Symbols** .......................................................................... 74
   12.1 General ............................................................................................. 74
   12.2 Equations .......................................................................................... 74

13. **Appendices** ....................................................................................... 76
   I Sample Reports .................................................................................... 76
   II Troubleshooting ................................................................................ 87
   III Configuration - Set-up Routine ....................................................... 89
   IV Prediction Equations ........................................................................ 92
   V Equipment, Supplies and Vendors .................................................... 94
   VI References ........................................................................................ 96
